Basic Zapper . . .

Please READ COMPLETELY and follow the Protocol Carefully

Thank you for your Zapper purchase from Raw Synergy. The basic zapper is designed to be conveniently worn against the skin—under clothing, mainly. Women often put it under a bra's vertical strap; men often put it in a sock at the ankle. Many wear it on a shoulder while sitting or driving. Some drop it into the shirt to wear at the waist, where the shirt is tucked in. You can also wear it in a convenient soft cotton terrycloth elastic wrist band, available at www.rawsynergy.com/bands. The zapper manufacturer advises against using an Ace Bandage because you need to be able to easily and quickly move it to another location if it starts to tingle or itch to prevent skin irritation. Please read paragraph two.

Caution: The zapper may start to **tingle or provide an uncomfortable sensation** after a few minutes when you're acidic. Please note - **if you don't move it, you may get a skin irritation**, slight burn, or a small, cauterized hole in the skin. In that case, the acid in the bloodstream has evidently collected under the disc, creating slightly more amperage through the skin. Moving the zapper keeps that acid moving. We assume acid in the body is mainly excreted by pathogenic organisms (parasites: fungi, viruses, bacteria, worms) so when you kill these with the zapper you should be less acidic. If you see blue/green/black marks on your skin, that's a normal reaction of the copper interacting with the skin, just like it would if you wore copper jewelry. It will either wash off in the shower or fade away as your skin cells shed over time.

All the bad bacteria in the body are evidently killed within the first few minutes. Zappers seem to encourage the growth of good bacteria. Viruses that are free in the blood and other fluids are also killed quickly but to entirely rid the body of a virus one needs to zap at least three to four weeks, since viruses hide inside cells and are only exposed to the electric current from a zapper when they emerge to replicate in the blood and other fluids. Three weeks is the life cycle of any virus. Fungi may take days, weeks, or months to eradicate since they often exist in layers. Worms in the organs seem to be destroyed the first day but worms in the intestines may take up to a week of constant zapping to be rid of.

The only place on the body where you will not get stung while acidic are the palms and soles. Many people hold the zapper in their palm or wear in a sock during sleep. It's easy to hold it through the night because the energy feels good. Zapping at night is a nice boost for the body's restorative/repair functions, too. A body will not become dependent on zapping.

We suggest that the way to get the most out of your battery-powered zapper is to wear it continuously, 24/7 except when bathing for 30 days, to kill all parasite life cycles, then you can wear it at night if desired. The health benefits of zapping will reveal themselves over a period of years, though you may find the results in the first few days to be most astonishing, assuming that you're fairly body-aware. Otherwise, I think it's a good idea to immediately put the zapper on when even the slightest sickness symptom begins. The sooner you'll zap, the sooner the symptom is likely to disappear. The longer a symptom occurs, the more damage is being done to the body and damage requires some time to repair.

When you zap during sleep, it's best to wear the zapper on palm of the hand or sole of the foot. Those areas should not be affected by tingle or burning, requiring you to move the zapper, even when you're acidic. Zapping evidently alkalizes you.

The Basic Zapper, is the smallest, most convenient zapper on the market and it easily fits in a pocket with your change so there's no reason not to keep it on hand. **Please note**, the zapper does not vibrate or emit any sounds while working.

The MORE you use the zapper, the sooner you'll likely become properly alkaline. It's perfectly safe to wear it around the clock and it's absolutely impossible to harm yourself with any battery-powered zapper; the current (five millionths of an amp in the body), is just too weak to do harm, though it's strong enough to disintegrate all the parasites. Pregnant women and people with pacemakers can use any zapper safely, also newborns and extremely sick people.

This Zapper uses a standard nine volt battery. (NOT included) Alkaline batteries last the longest. Energizer and DuraCell (in the U.S.) fit well in this zapper. Some brands are too 'fat' to allow the lid to close tightly. We use and recommend Energizer.

Use ONLY fresh batteries, When the switch is turned on, the red LED light will FLASH RAPIDLY.

If you like, you can test the zapper after changing the battery. If you don't have a voltmeter, make sure the copper contacts are **clean**, then just touch both discs at the same time with your tongue or lips when the switch is turned on and the red light is flashing. With a **new battery**, you'll feel a strong tingle. (be sure to moisten lips or tongue for best results)

*****Please take care when you install or remove a battery**, so you don't break a wire. If you are not careful when you remove the battery clip from the battery, you may damage the plastic cover or loosen a wire. **Very important** - Don't pull it off by grasping the wires! If the clip does not lift easily, try this: Gently install or remove **one** battery clip from the battery, twist the clip, and gently install or remove the **other** clip. BE CAREFUL, don't damage the metal connectors on the battery clip. Check out the battery installation / removal video at rawsynergy.com/battery. If you damage the cap or connectors, your zapper may not work, but the manufacturer can repair it for a small fee. Please be careful.

If you drop the zapper in water, just remove the battery immediately and drain the water out and let it dry completely. It's not guaranteed, but it's very possible that you may not damage the zapper if you follow that advice.

Basic Zapper maintenance:

We highly recommend **changing your battery after every 96 hours** of use, for maximum effect. We've found that batteries **lose much of their power after 4 or 5 days**. The zapper will still work, just not as effectively. We use and recommend **Energizer 9V batteries**, single use, alkaline batteries work the best. The red Zapper LED light will flash rapidly when the switch is turned on. (Please see below for used zapper battery options)

Also, it's **very important** that you **keep your copper contacts clean**. We use and recommend this awesome Raw Synergy DRY copper contact cleaning cloth for the easiest, most efficient cleaning.

For BEST results, Using the DRY cleaner cloth, rub copper contacts with medium to firm pressure for quick, effortless results, then wipe your copper contacts with a soft moist cloth and dry. The two sided cloth is effective until completely black, and is NOT washable. The copper contact cleaner cloth is available at rawsynergy.com/cleaner (Do Not Wet Cloth - Do Not Use on gold plated items)

Please DO NOT use any lemon juice or vinegar solutions. The manufacturer indicated that lemon juice or vinegar will corrode the copper contacts, and may cause the copper disks to loosen and dislodge from the

As your body detoxes, it tarnishes the copper discs, and REDUCES the zappers effect, so cleaning is VERY important to make sure you are getting the best contact and results from your Zapper.

Important: Even brand new, clean copper contacts will leave black marks on the cloth EVERY time you wipe the copper, which is just the cleaning agent in the cloth reacting to the copper. If your contacts look clean and shiny, you're good to go.

After zapper use, batteries still retain plenty of power to run a clock, small appliance, or our **Special LED Flashlights**. Available at www.rawsynergy.com/ledlights. **Please remember to recycle batteries responsibly**. Please DO NOT throw used batteries in the trash. To locate your nearest recycling center, please visit www.earth911.com, enter the term "single use batteries" and your zip code in the area provided.

DISCLAIMER: The Basic Zapper is not intended for use in the cure, mitigation, treatment, or prevention of any disease; not intended to affect the structure of any function of the body; not intended for medical or therapeutic purpose. All information is for educational purposes only. The Basic Zapper has not been licensed by the FDA or AMA for use on humans, animals, or plants. Do not experiment with a zapper if pregnant or wearing a pace maker. Talk with a health professional before attempting any self health program.

Please note ****The 9 volt battery is NOT included**, so make sure to have plenty of 9 volt alkaline batteries on hand so you can install a fresh one when your Zapper battery gets low. Energizer/Duracell single use alkaline batteries seem to work best.

Even on brand new zappers, copper contacts can appear marked or scratched. The zapper manufacturer tells us that because of the nature of the manufacturing process sometimes cosmetic imperfections are unavoidable.

Check out the zapper videos at www.youtube.com/rawsynergytv for instructions regarding proper use, cleaning zapper contacts and replacing the battery. **If you need additional or replacement zapper information & instruction sheets**, visit www.rawsynergy.com/zapperinfo.
